

Enterprise Onboarding & SLA Guide

doc_enterprise_onboarding | Pathwise Help Center

This guide covers the onboarding process for new Enterprise customers, along with the uptime commitments and service credit structure that apply once onboarding is complete.

Onboarding Steps

Step 1: A Pathwise account manager schedules a kickoff call within 3 business days of contract signature to confirm the customer's team structure, SSO requirements, and data migration needs. Step 2: The customer's admin receives provisioning credentials and is asked to configure SSO before any team members are invited, since inviting members before SSO is active would require them to be re-invited afterward. Step 3: A dedicated migration specialist reviews any existing data the customer wants imported from a previous tool, and provides a compatibility report within 5 business days identifying which fields can be migrated automatically and which require manual mapping. Step 4: The customer approves the migration plan, after which the migration specialist performs a test migration into a sandbox environment rather than the production account, so the customer can validate the results before anything is finalized. Step 5: Once the customer confirms the sandbox migration looks correct, the same migration is repeated into the live production account, typically within 2 business days of sandbox approval. Step 6: The account manager schedules a final walkthrough call to confirm the production environment matches expectations and to train the customer's admins on Enterprise-specific features such as advanced permissions and custom workflow templates. Step 7: The account enters standard support rotation, and the 4-hour SLA response commitment begins from this point forward rather than from the original contract signature date. Step 8: Approximately 30 days after go-live, the account manager schedules a check-in call to review adoption metrics, such as how many invited team members have logged in and how many boards are actively in use, and identifies any team members who may need additional onboarding support. Step 9: At the 90-day mark, a more detailed business review is scheduled, during which the account manager presents usage trends, discusses whether the current seat count and add-on configuration still match the customer's needs, and surfaces any upcoming feature releases that may be relevant to the customer's workflows. Customers who skip the 30-day check-in are still offered the 90-day review, but Pathwise recommends attending both, since teams that complete the 30-day check-in show meaningfully higher long-term adoption according to internal account management data. Step 10: If the 90-day review identifies that the customer's usage patterns would benefit from a different seat count or add-on configuration, the account manager prepares a revised proposal and schedules a follow-up call to walk through the recommended changes before any contract amendment is drafted, ensuring the customer has full visibility into cost implications before committing to any adjustment.

Uptime Commitments and Service Credits

Monthly Uptime	Service Credit	Credit Applies To	Claim Deadline	Notes
99.9% or higher	No credit — SLA met	N/A	N/A	This is the baseline committed uptime

Monthly Uptime	Service Credit	Credit Applies To	Claim Deadline	Notes
99.0% – 99.89%	5% of monthly fees	Following month's invoice	30 days from incident	Applies to Enterprise plans only
95.0% – 98.99%	15% of monthly fees	Following month's invoice	30 days from incident	Applies to Enterprise plans only
Below 95.0%	30% of monthly fees, plus optional termination right	Following month's invoice, or contract exit	30 days from incident	Customer may terminate without penalty if this occurs twice in a rolling 6-month window

Scheduled Maintenance Exclusions

Scheduled maintenance windows, announced at least 5 business days in advance and limited to 4 hours per calendar month, do not count against the uptime commitments above. Emergency security patches are exempt from the 5-day notice requirement but are still excluded from downtime calculations if resolved within 2 hours.
